

## Digital Laser Doppler Vibrometer Fiber-Series

### SWIR Fibre-Optic Laser Vibrometer

Infrared laser Doppler vibrometer with compact fibre-coupled measuring head. Ideal for confined spaces, in climatic chambers, or when exposed to high levels of radiation.

#### IDEAL FOR

- Dark / rough surfaces
- Where physical access is difficult
- Measurements in vacuum- or climatic chambers
- Quality inspection from different points of view
- High speed vibrations up to 25 m/s

#### FOR SPECIAL MEASUREMENT ENVIROMENTS

The FIBER Series is a follow-up development of the NOVA Series in which the compact optical head is connected via fibre optics with the measuring instrument. Separate fibres for the measurement beam and the reflected signal ensure optimum signal quality.

Compact measuring heads make the system not only particularly suitable for measurements in a confined space but also simplify handling when the application requires a frequent repositioning of the head. Specially made heads are available for vacuum- or climatic chambers as well as for extreme environments with very high levels of background radiation.
